PYA TEAM Dashboard

Turning Data into Decisions

PYA's TEAM Dashboard is built to address the challenges of the Transforming Episode Accountability Model (TEAM). It transforms raw claims data into a strategic asset, delivering a comprehensive, customized, 360-degree view of each episode of care. The dashboard empowers leaders to make informed, timely decisions.

Key Dashboard Capabilities and Benefits

Each feature of the PYA TEAM Dashboard is aligned with the core challenges hospitals must overcome to succeed under TEAM:

Episode Cost Analysis by Care Setting: Breaks down total episode costs across inpatient, outpatient, skilled nursing, inpatient rehabilitation, and home health settings, enabling executives to pinpoint high-cost areas and implement targeted interventions to reduce variation and optimize care delivery.

Attending and Operating Physician Performance Tracking: Benchmarks physician performance on episode cost, outcomes, and variance from targets, highlighting differences in clinical practice and supporting governance efforts to align care with standardized protocols.

Post-Anchor Episode Deep Dive: Analyzes the 30-day post-discharge period to uncover readmission patterns and post-acute utilization trends, helping identify upstream workflow gaps and opportunities to improve care transitions and reduce costly complications.

Episode Journey Visualization: Provides a timeline view of the full patient journey from anchor event through post-acute care, revealing inefficiencies and care fragmentation. This visual tool enhances coordination and supports strategic partnerships with post-acute providers to improve outcomes and reduce costs.

These capabilities work in concert to turn information into insights, data into decisions. The dashboard's executive-friendly design ensures that the most critical information rises to the top—whether a spike in episode cost or a trend in physician performance—so leaders can prioritize their responses. Consistent filters and terminology allow for data slicing by service line, physician, or episode type, while key metrics such as episode volume, average cost, and outcomes are presented clearly for rapid interpretation.

The PYA TEAM Dashboard functions as both an early warning system and an opportunity finder. It enables hospital executives to identify where performance is strong and where improvement is needed—before potential financial penalties are incurred.
